Security Guidelines

As you are aware, Operation Protective Edge has brought us to deal with missile and rocket attacks from Gaza. Hereunder, you will find a summary of appropriate action to be taken when hearing a siren, based on the instructions of the Home Front Command (Pikud Ha'oref).

Acting in accordance with these instructions is critical and will significantly reduce danger.

A siren in the greater Tel Aviv area provides approximately 1½ minutes to find appropriate secure space. Once the siren stops, you are requested to stay 10 minutes within the secure area if no further instructions are issued. Stay clear of unidentified objects.

In buildings:

- 1) A **MAMAD** (residential secure space - consult with your landlord regarding which room in your apartment answers this definition) or a **MAMAK** (secure space outside your apartment- within the building floor, usually a communal space such as a staircase)- provides shelter within your residential setting.
- 2) Some apartment buildings are equipped with an internal communal shelter - often located at the bottom floor or just outside the building (this is the case for TAU dorms A and B). Making your way down towards the shelter - you should avoid using elevators and use the staircase.
- 3) A public shelter can also be found in some neighborhoods and accessed through signs/maps provided by the local authority. Make sure you can get to your selected public shelter within the time provided
- 4) If you reside in a tall building (three floors and above) and lack access to either of the above, simply enter the staircase and make your way down. Residents of the top floor in a three-floor building without a protected space, shelter or reinforced security room should descend one floor and remain in the staircase.
- 5) In the absence of any of the options above, one should choose a secure internal room with a minimum of external walls and open windows. One should not select a kitchen, a bathroom, or a shower given the risk that the mirrors or glass might shatter. Sit on the floor (below the level of the windows), close to an interior wall and not facing a window.

If you are outside:

In a populated area – enter the closest building and go to the shelter or staircase- at any time follow instructions from others around you in the building.

In an open area without close access to a building, lie down and cover your head with your hands.

While traveling by car:

Stop at the side of the road, get out of the car and to the nearest building or protected area. If you do not have time to reach a building or protected area, get out of the car, lie down and cover your head with your hands. If you cannot follow either of the above instructions, stop and wait in the vehicle for ten minutes.

People traveling in public transportation:

- **by bus**, the driver should stop the bus and open the doors. Follow the instructions depending if there are buildings or if it's an open area. If there is no other option, bend over until you are beneath the level of the windows and protect your heads.

- **by train**, the driver should slow down to 30 km/h for ten minutes. You should bend over beneath the level of the windows.

Some protected spaces on campus and in the dorms

Building	Place of shelter in the building	Area in square meters	Max Capacity	Emergency tel nr. dial: 03640....
Naftali Building	Naftali Basement+ marked staircases	42	106	9526
