This course will examine the major international security challenges facing the world today. It will use both empirical and theoretical materials to study the evolution of these challenges, from the cold war to the present day. The course will discuss the challenge that ballistic missile and nuclear proliferation poses to the stability of the international system and will include an analysis of Israel’s nuclear policy, the Iran nuclear weapons program, the conflict between India and Pakistan and the situation on the Korean Peninsula. There will also be an examination of arms control efforts in the Middle East. The course is designed to enable students to gain a more comprehensive understanding of the fast-paced developments in the field of international security. The course will include guest lecturers, the screening of films to illustrate the themes under examination and interactive class discussions.
